

MageINIC

[Instagram Feed](#)

FEATURES

- **Integration with Instagram API:** The extension should allow you to connect your Magento 2 store to your Instagram account using the Instagram API.
- This enables the extension to fetch and display your Instagram feed on your store.
- **Customization Options:** You should be able to customize the appearance of your Instagram feed to match your store's design.
- This might include options for choosing the number of photos to display, the layout (e.g., single row, multi row).

Ultimate Guide for Magento 2 Instagram Feed

Introducing Magento 2 Creating an Instagram feed can be a great way to showcase your brand's social media content and engage with your website visitors. Here's a comprehensive guide to help you set up an Instagram feed for your Magento 2 store.

- **Install and Configure Magento 2**
Ensure you have a working Magento 2 installation.
- **Create an Instagram Developer Account:** To access Instagram data, you'll need to create a developer account on the Instagram basic display platform.
- Install the extension via Magento 2's admin panel.
- **Configure the Instagram Feed Extension:** Access the extension's settings within the Magento 2 admin panel.
 - Enter the Instagram API credentials, including the access token you obtained earlier.
 - Configure feed display options, such as the number of posts, layout, and design.
- **Customize the Appearance:** Customize the appearance of your Instagram feed to match your store's design and branding.
 - Most extensions offer options to the feed's layout.
- **Add the Instagram Feed to Your Store:** Depending on your chosen extension, you can usually add the Instagram feed to your store in various ways:
 - Using a widget: Place it in the desired location on your website.
 - Creating a CMS page: Insert the feed's shortcode or block code.
 - Editing theme templates: Embed the feed directly into your store's templates.
- Test the Instagram feed to ensure it's working correctly.
- Monitor your feed's performance and user engagement.
- Consider optimizing the feed based on user feedback and analytics data.

Experience the Promote your Instagram feed within your Magento 2 store, social media channels to encourage user engagement and increase followers.

How to install the extension

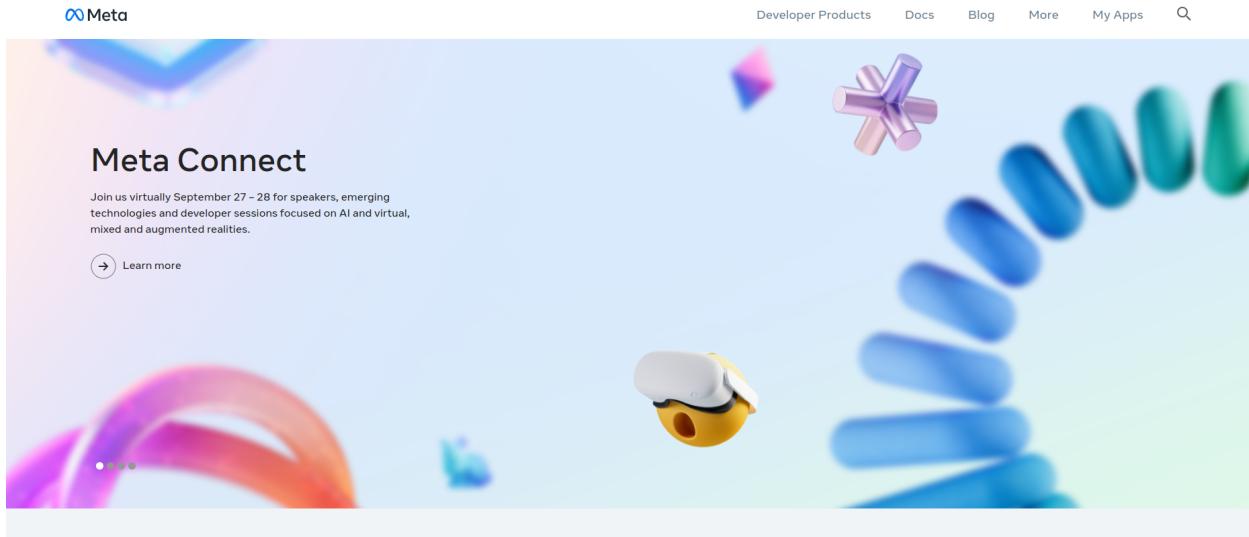

1. Upload via ZIP/Archive

- Back up your store's database and web directory
 - Download the extension zip file and extract the zip file
 - Transfer the **app** folder into the **Magento2** root directory on the server
 - Enable maintenance mode **php bin/magento maintenance:enable**
 - Run the command **php bin/magento module:enable MageINIC_Core MageINIC_InstagramFeed**
 - Run the command **php bin/magento setup:upgrade** to install the extension
 - Run the command **php bin/magento cache:clean** to clean the cache
 - Disable maintenance mode **php bin/magento maintenance:disable**
 - Check the store environment if everything is working properly. If, at any point, the store displays an error, check the Magento logger for more details.
-

Configure Instagram API

create the **Facebook app** and the **Facebook App API** information, please follow these steps:

- Go to: <https://developers.facebook.com/>
- Log in to Facebook. Click Login to sign in with the existing Facebook account, or register a new account. After logging in, choose My App from the menu at the top.

- Select the app type that you are using. Fill out the Display name for your app.

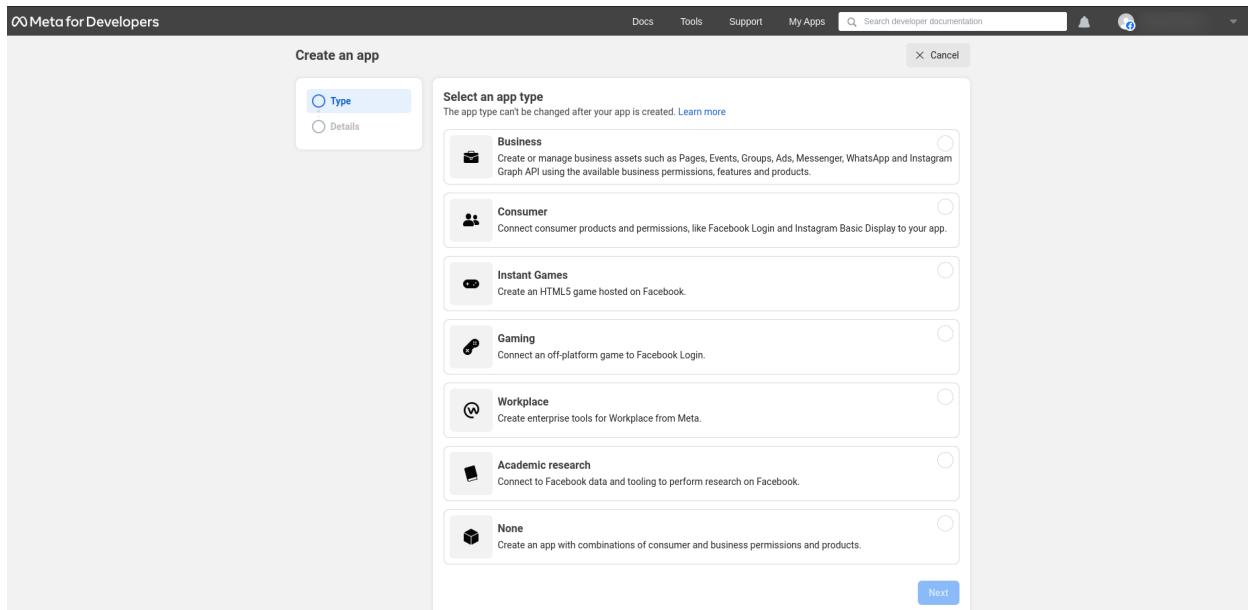

This screenshot shows the 'Apps' section of the Meta for Developers dashboard. The top navigation bar includes 'Docs', 'Tools', 'Support', 'My Apps', and a search bar. On the left, a sidebar titled 'Filter by' has three options: 'All Apps (6)' (selected), 'Archived', and 'Required actions'. The main area displays six app entries, each with a thumbnail showing a stylized atom or gear icon, the word 'Administrator', and three dots for more options. A 'Create App' button is located in the top right corner of this section.

This screenshot shows the 'Create an app' dialog box. The title bar says 'Create an app' with a 'Cancel' button. The main content area is titled 'What do you want your app to do?'. It lists three options:

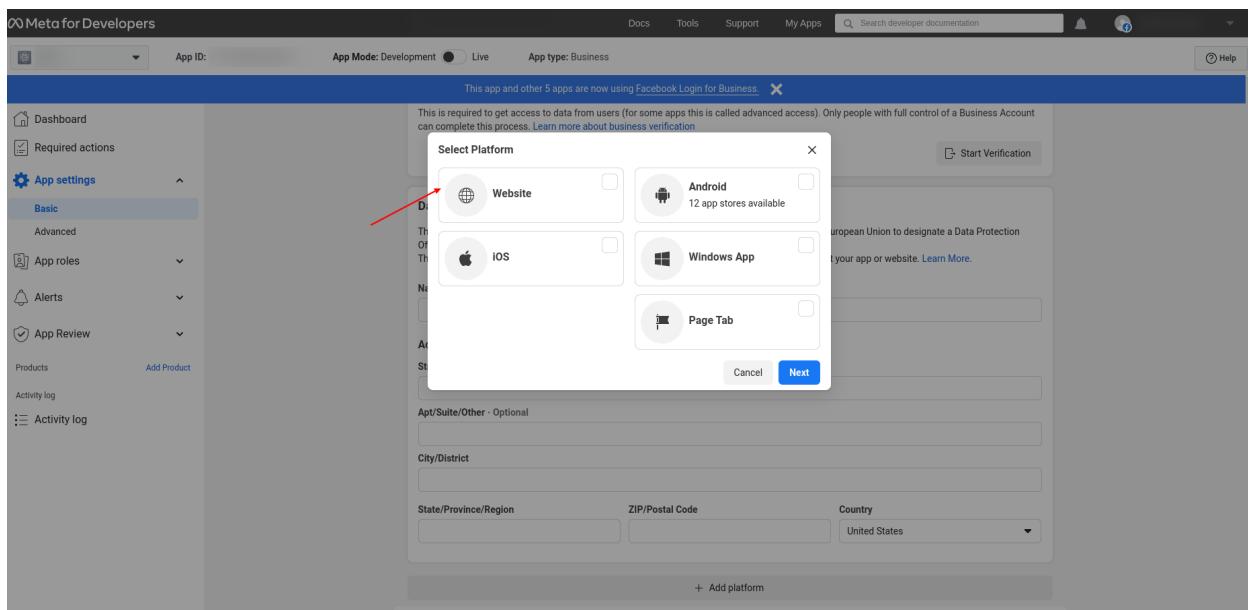

- Allow people to log in with their Facebook account**: Described as the most common use case, involving a secure, fast, and convenient way for users to log into the app.
- Get gaming login and request data from players**: Allows players to log into the game across multiple platforms and ask users for permission to access player data.
- Other**: Explains that this option explores other products and data permissions such as ads management, Instant Games, and more.

A 'Next' button is located at the bottom right of the dialog.

- Click next

- Go to **Settings > Basic**, click Add **platform** and choose **Website**. After that, click Next button to add your website's URL. You can add other platforms based on your needs.

- Click next

- After clicking **Setup**, you are redirected to **Instagram Basic Display > Basic Display**, click **Create New App** to start creating new app.

Instagram accounts.

Use this tab to configure the API's authorization window so you can get permissions from users, and to submit your app for App Review when you are ready to switch it to Live Mode.

Note that Basic Display is **not an authentication tool**. Data returned by the API cannot be used to authenticate your app users or log them into your app. If your app uses API data to authenticate users, it will be rejected during App Review. If you need an authentication solution, use Facebook Login instead.

Permissions and Use Cases

To help individuals share their own content with 3rd party apps: Profile Permission
This permission is meant for apps that allow the general public to log in with Instagram to get their basic profile information; for example, an app that retrieves a person's Instagram username and account type. Apps that fall into this use case must use the `instagram_graph_user_profile` permission.

To help individuals share their own content with 3rd party apps: Media Permission
This permission is meant for apps that allow the general public to log in with Instagram to get their own content; for example, an app that allows people to print their own pictures from their Instagram profile. Apps that fall into this use case must use the `instagram_graph_user_media` permission.

To learn more about Instagram Basic Display's permissions, please visit the [Basic Display Permissions documentation](#).

Create New App

- Here you need to complete fields such as **Valid OAuth Redirect URIs**, **Deauthorize callback URL**, **Data Deletion Request URL** (can enter your website URL), and with the **User Token Generator**, you click **Add or Remove Instagram Testers** button.

This app and other 5 apps are now using Facebook Login for Business. **X**

Data Deletion Request URL

User Token Generator

Generate long-lived access tokens for Instagram Testers of this app. Tokens can only be generated for public Instagram accounts. Refer to our developer documentation for more information.

Add or Remove Instagram Testers

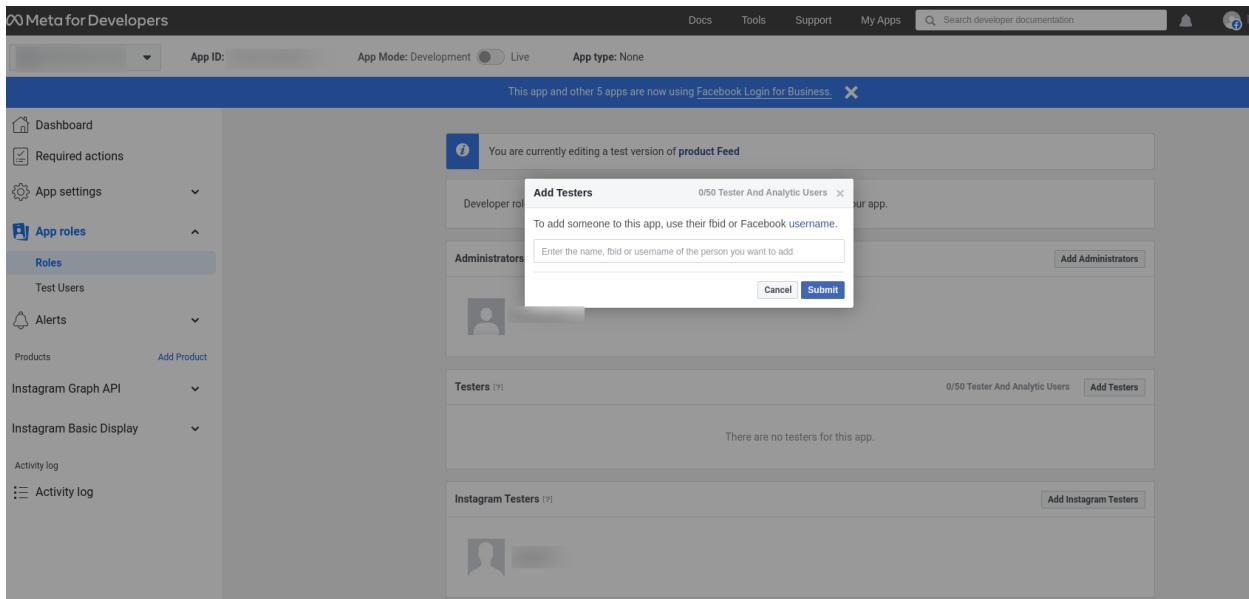

App Review for Instagram Basic Display

To use Instagram platform, your app needs to be approved for `instagram_graph_user_profile` and `instagram_graph_user_media` permission.

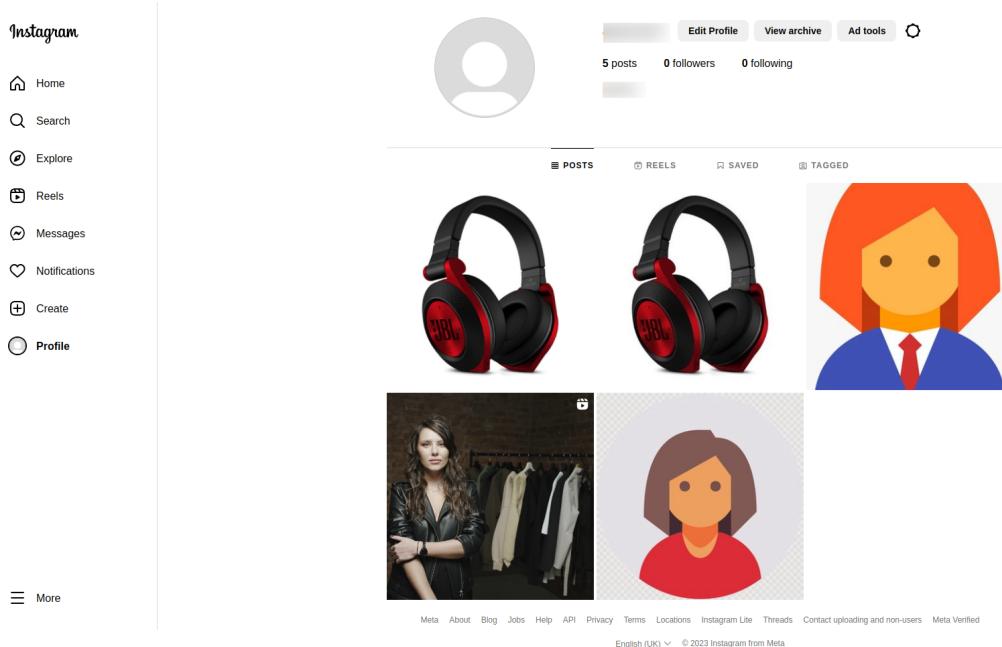

<input type="radio"/> <code>instagram_graph_user_profile</code> Grants the ability to read an Instagram user's profile info.	Add to submission
<input type="radio"/> <code>instagram_graph_user_media</code> Grants the ability to read an Instagram user's media.	Add to submission

Discard **Save changes**

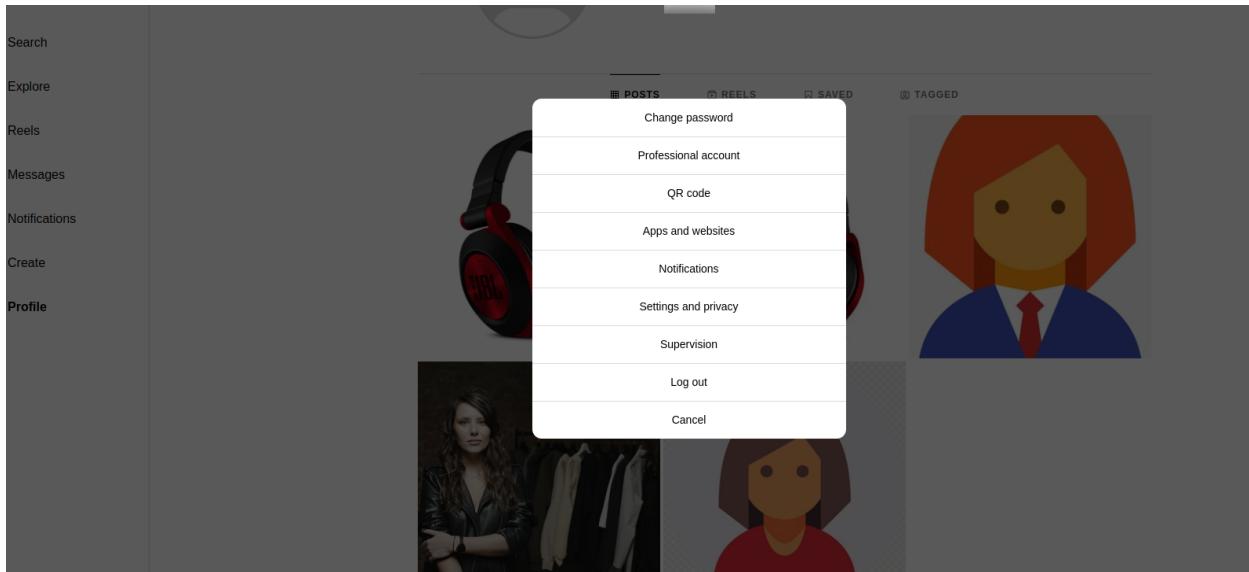

- Redirect to **Roles > Roles**, select **Add Instagram Tester** button connected to the Instagram account. Enter the username of the Instagram account that you want to send invitation and click **Submit** button. Note: The posts of the Instagram account that you sent invitation and get its token, will be displayed on your website.

- Log in to the Instagram account that got invitation, select your profile icon and click **Profile**.

- Then click the **settings icon**, select **Apps and Websites** and go to **Tester Invites** section to Accept the sent invitation.

A screenshot of the Instagram 'Apps and Websites' section. On the left, there's a sidebar with links: Edit Profile, Change Password, Apps and Websites (which is highlighted with a red box), Email notifications, Push Notifications, Manage Contacts, Privacy and Security, Login Activity, Emails from Instagram, and Help. Below this is a 'Switch to Professional Account' button. The main area shows a title 'Apps and Websites' with tabs: Active, Expired, Removed, and Tester Invites (which is highlighted with a red box). Underneath is a 'Sample' section showing a sample entry with a 'Decline' button, an 'Accept' button (which has a red arrow pointing to it), and a 'Remove' button. The sample entry also includes the text 'Authorized by you on May 19, 2024'.

- Go to **Instagram Basic Play > Basic Display > User Token Generator**, choose **Generate Token** button in the account you just sent the invitation to get Token.

The screenshot shows the Facebook App Dashboard under the 'Data Deletion Requests' section. It includes fields for 'Data Deletion Request URL' and a 'User Token Generator' section. The 'User Token Generator' section contains a table with 'Instagram Test Users' and 'Tokens' columns, and a 'Generate Token' button highlighted with a red arrow.

- Copy that token and go to User Token field in the MageINIC Instagram Feed extension.

Extension Configuration

To configure the extension configuration, Please go to **Stores → Settings → Configuration → MageINIC → Instagram Feed**.

General Configuration

The screenshot shows the MageINIC Extension Configuration page. The left sidebar lists modules: DASHBOARD, SALES, CATALOG, SECURITY, CUSTOMERS, SALES, MAGEINIC (which is selected), SERVICES, and ADVANCED. The main area is titled 'General Configuration'. It has a 'Scope' dropdown set to 'Default Config'. Under 'General Configuration', there is an 'Enable' field with the value 'Enable' and a note about enabling the module and creating applications on developers.facebook.com. Below it is a 'User Token' field containing a long string of characters: 'IGQWRQZAzdgdUhDcU0wYmtcyUVpSVjaXZAx0xYUDBsczVjNTRFU2xsT0Nam5'. There is also a note to refer to the link for the user token.

Enable: Select Yes to enable the module

User Token: Enter Instagram Access Token.

Display

The screenshot shows the MageINIC extension configuration interface. On the left, there's a sidebar with various menu items like Dashboard, MageINIC, Sales, Catalog, Customers, Marketing, Content, Reports, Stores, System, and MageINIC Partners & Extensions. The main area is titled 'Display' under 'General Configuration'. It includes fields for 'Total number of photos' (set to 12), 'Layout' (set to 'Multiple Rows'), 'Number of row' (set to 2), 'Show Caption' (set to 'Yes'), and 'Show pop-up' (set to 'Yes'). Each field has a note below it explaining its purpose. A yellow header bar at the top indicates a failed synchronization attempt with the Magento Business Intelligence service, with a 'Retry Synchronization' button. The top right corner shows 'System Messages: 1' and the user 'admin'.

Total number of items - Select the number of images to be shown on your site, The maximum image number is 25

Layout - Select to arrange instagram images in one single row, two rows or in an organized layout

Number of row - Insert the number of row. Highly recommend from 1 to 25 (valid numbers) for a clearer visuality on your website.

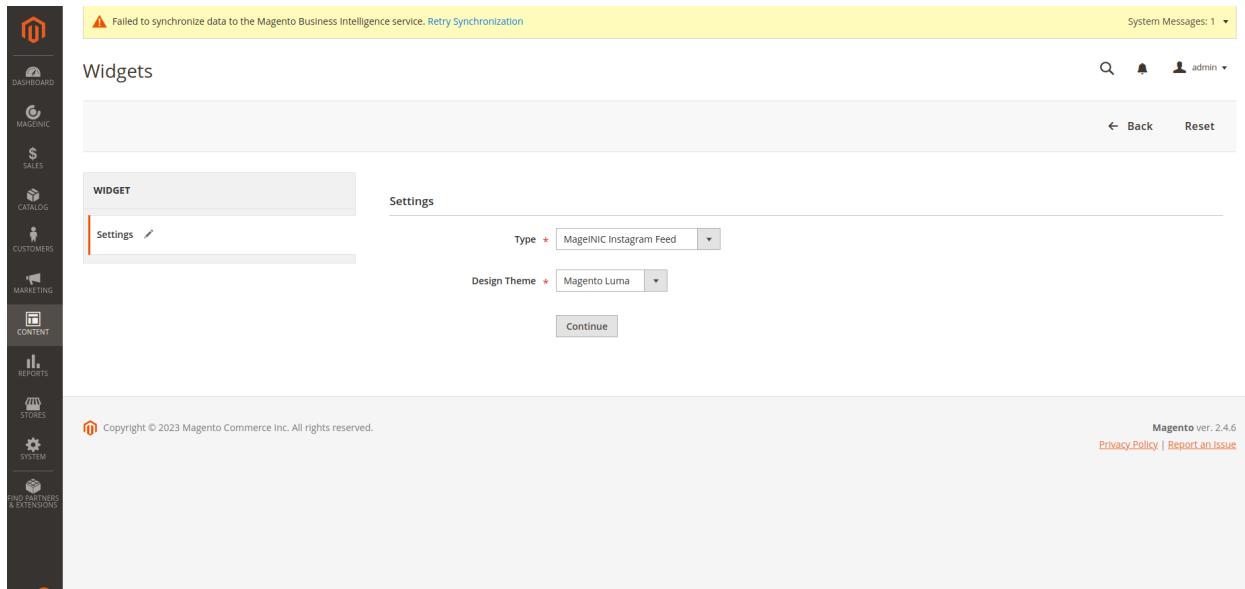

Show Caption - Select Yes to show caption when hovering image.

Show pop-up - Select Yes to allow displaying popup as clicking to images

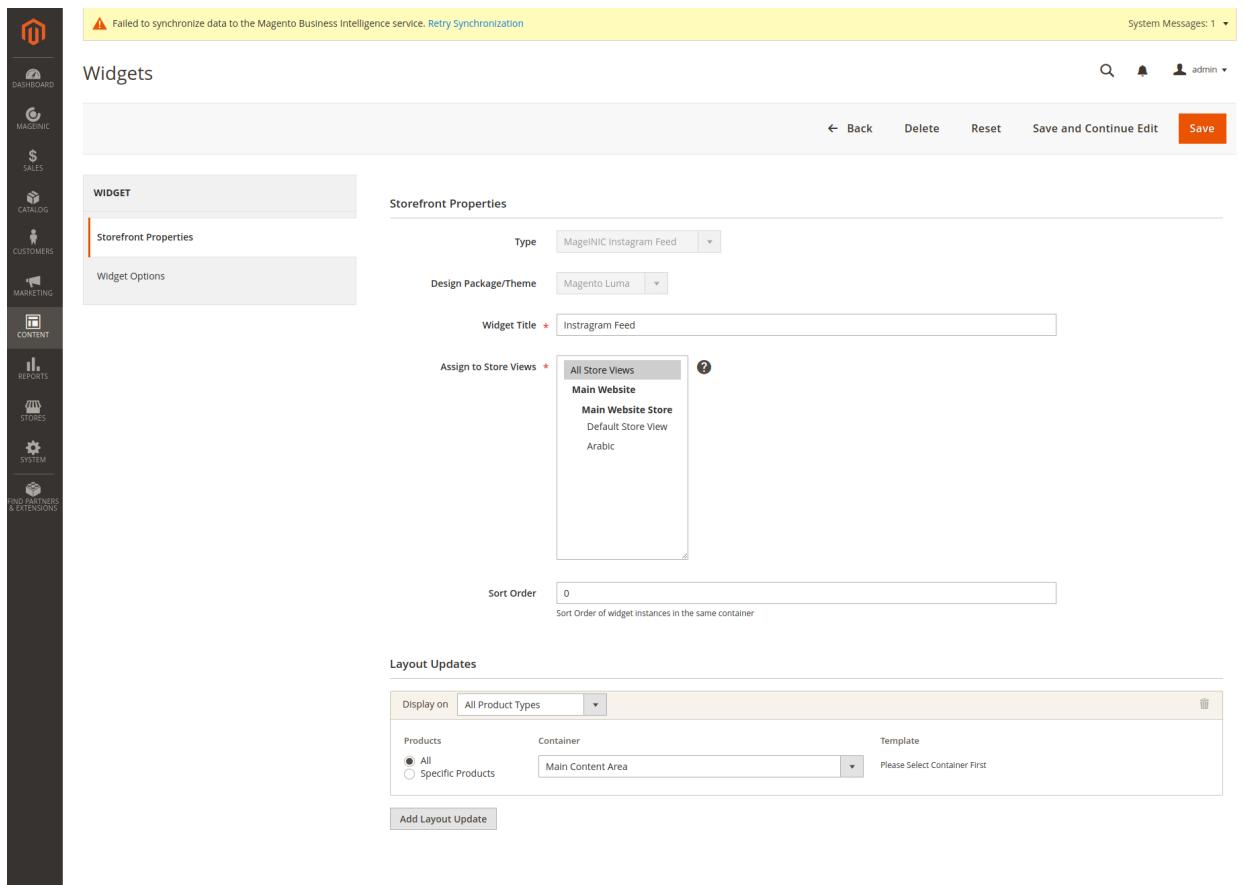

Extension Usage

Add Widget

Please go to **Content > Elements > Widgets**.

- In the upper-right corner of Widgets workplace, click on Add Widget button.
- In the Settings section:
 1. Choose Widget type in the Type box.
 2. Choose the current theme you are applying in the Design Theme.
 3. Click Continue button.

Complete the Storefront Properties section

- Enter **Widget Title** for the internal reference.
- Assign the block to all store views in the **Assign to Store View** field or to any store view you want to apply the block.
- Set the **Sort Order** if many blocks are placed at the same container. The block is at the top if the inserted value is zero.

In the **Layout Updates section**, click on **Layout Update** to set the layout.

- In the **Display on** field, choose the **category, product, or page** in which the block can be shown
- If you want to display the block on specific page, you can choose the **Page** and the **Container** is the position the block will appear on that page.

The screenshot shows the 'Widgets' configuration screen in the Magento Admin. A yellow header bar displays a warning: 'Failed to synchronize data to the Magento Business Intelligence service. [Retry Synchronization](#)'. On the right, there are system message notifications for 'System Messages: 1'. The main area has tabs for 'Dashboard', 'MAGENTIC', 'SALES', 'CATALOG', 'CUSTOMERS', 'MARKETING', 'CONTENT', 'REPORTS', 'STORES', and 'SYSTEM & PARTNERS'. The 'SYSTEM & PARTNERS' tab is currently selected. The left sidebar lists 'Widgets' under 'WIDGET'. A central panel shows 'Widget Options' for a 'Storefront Properties' widget. The 'Title' field contains 'Instagram feed' and the 'Description' field contains 'Instagram Photos'. A dropdown menu for 'Design' is set to 'Use Config'. At the bottom, there's a copyright notice: 'Copyright © 2023 Magento Commerce Inc. All rights reserved.' and a footer with 'Magento ver. 2.4.6', 'Privacy Policy', and 'Report an Issue' links.

Configure Widget Options to display Instagram images

- **Title :** Insert the title for Instagram images displayed on Frontend
- **Description :** Insert the description for Instagram images displayed on Frontend.
- **Design :**
 - Use Config:** Display the product images by using the Instagram images configuration
 - Custom:** Admin can custom the displaying of Instagram images on frontend
- Check and verify image,title and description. Also, You can see the updated image,title and descriptio on the frontend side
